Prevailing from the early 1990s to the early 2000s, Photoshop and its progeny of image editing applications from Adobe were largely isolated in their product line. In the social media age, however, changes in the way human beings connect, work, and create, coupled with ubiquitous connectivity, have given rise to an entirely new breed of software tool. This new set of tools is being powered by Adobe's Q Application, a new flagship set of application development tools. Q includes the professional-focused product Qt Creator. Adobe also has a feature-for-feature licensed version of Qt Creator for macOS. This umbrella of development tools spans both the professional and macOS ecosystem, and largely comprises new features in Adobe Illustrator, Edge Animate, InDesign, and Photoshop, as well as the open source Q tool suite. The Abu Dhabi edition of the Adobe Summit 2019 showed off the UI of the Creative Cloud app. It's looking an awful lot like an Adobe Subscription service with universal access to Photoshop, InDesign, and other products. Tools at the summit included the ability to convert EPS and PSD file types with a new support for W3C-based XML export format. A dynamic menu operates at the top of the panel in Photoshop, letting you filter Photoshop's various tool palettes, layers, and panels. There's also a new feature that reveals all of the brushes, masks, paths, and layers after cropping a cropped area of the image. A new 3D display mode lets you see the entire scene according to depth. The timeline alignment feature lets you drag graphic blocks out of what's in a composition, and arrange them in a simple and intuitive fashion. There's also a redesigned color, contrast, and saturation controls, along with a feature which lets you apply adjustments to a photo without actually opening the photo edit window.
